Prevent Snow Slide Risks on Façades

THE CHALLENGE

Façade design has evolved to be incredibly thermally efficient. However, the lack of heat loss leads to additional snow and ice accumulation creating a critical liability: sudden, dangerous snow and ice releases.

THE SOLUTION: ALPINE SNOWGUARDS LEDGE-ANGLE

Specialized for façades, the LEDGE-ANGLE holds snow and ice on narrow horizontal surfaces, allowing it to melt and shed gradually

Ledge-Angle | Aluminum

LEDGE-ANGLE SYSTEM

Seamless Safety

Keep your façade seamless. Blend high-performance safety into your façade with our low-profile design and in-house powder coating.

Proven Reliability

Invest in reliable protection. Third party tested and accredited by Microclimate Ice & Snow Inc.

Watertight Security

Protect your building from leaks. Our patented design provides a 100% waterproof shield and permits water drainage for worry-free protection.

Secure Protection

Remain confident during harsh winters. Effectively mitigate liability and provide safe passage to pedestrians near your building from falling snow and ice

Roof Types	Materials	Finishes
Façade	Aluminum (AL)	Mill Finish, Powder Coating (additional charge) using RAL TIGER Drylac® Exterior Colors
